

## Cornice Nr. 117 “Wellington”

A large cornice. Heavily enriched and quite sturdy in profile. This drip / dentil / egg & dart design has the bulk to locate in an area with a fairly high ceiling.

While we have several other large patterns, this one has much more “volume” than most of those. If you want A large dentil / drip design consider also our number 131 “Ainsty Dentil”.

Because this design has practical production difficulties for us we necessarily have to charge a premium cost above most of our other large enriched cornice profiles.

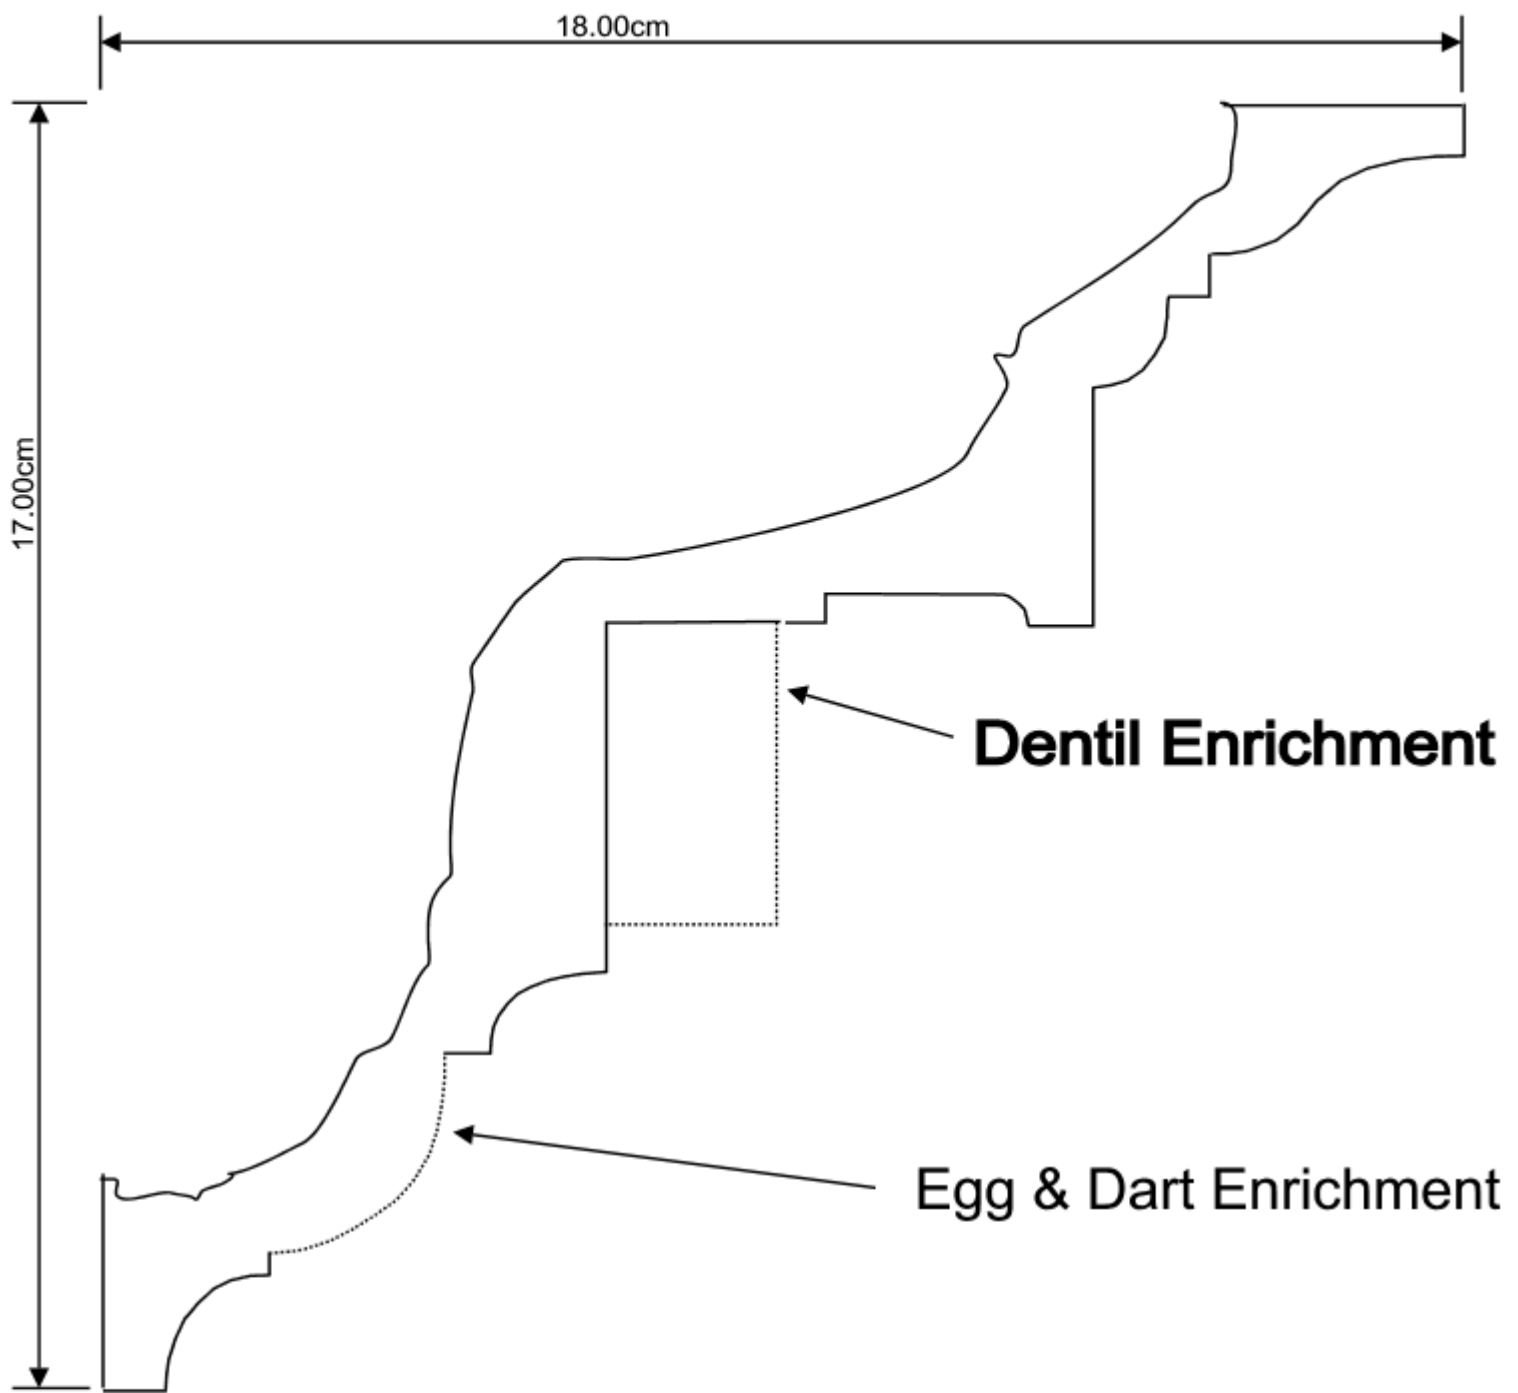

The “lead” time for manufacture will also be a little extended with this pattern.

**Projection 180mm. (c.7”)**

**Depth 170mm. (c.7”)**

**Length of Cast 3100mm. (10’2”)**

**Heavily Enriched Profile**

## Nr. 117 "Wellington"

Full size at A4 - actually just a guide, but hopefully helpful for general profile and guidance.

But for absolute certainty please ask for a hand drawn profile. We'll be happy to provide this, especially as we have no sample of this design for you to view.
