## **“Genova” Panel Moulding, Design Nr. 305**

This is a large, strong panel design. There are no plans to produce any corners or other accessories for this style.

One possible use for this item is to the front edge of the cornice on the ceiling line. This can give the genuine impression of greater projection, dimension and size.

Being symmetrical it is quite suitable for networks of panel design.

If you have large scale walls - particularly high ceilings this could quite easily be suitable for your “biggest room” - whether this is in your home, grand restaurant or boardroom.
