

Cornice Nr. 114 “Small Dentil” (Georgian in Style)

A very small cornice, please note the extremely small projection at just 55mm. So small in fact that I've exceptionally (once) seen this one used as a dado moulding! It unusually has a smooth finished top.

I've fitted this design in my home kitchen. This area has quite a low ceiling, but also some Ossett Mouldings Ltd. Imitation timber beams. These two items fit really well together.

As is usual, page two has a full size approximate cross Sectional sketch for your reference and information.

Again, an unusual but potentially very useful cornice Moulding indeed.

Projection 55mm. (c.2")
Depth 65mm. (c.2.5")
Length of Cast 3150mm. (10'4")
Dentil Enriched Profile

Nr. 114 "Small Dentil"

A very approximate cross section, I will re-draw this when time allows. However it does give some impression of proportion.

Please note the (possibly helpful) smooth top. A small section of this appears in our Dewsbury showroom, actually at eye level by our entrance door.
