

**Cornice Nr. 121 “Kings Suite”
(Modern in Style)**

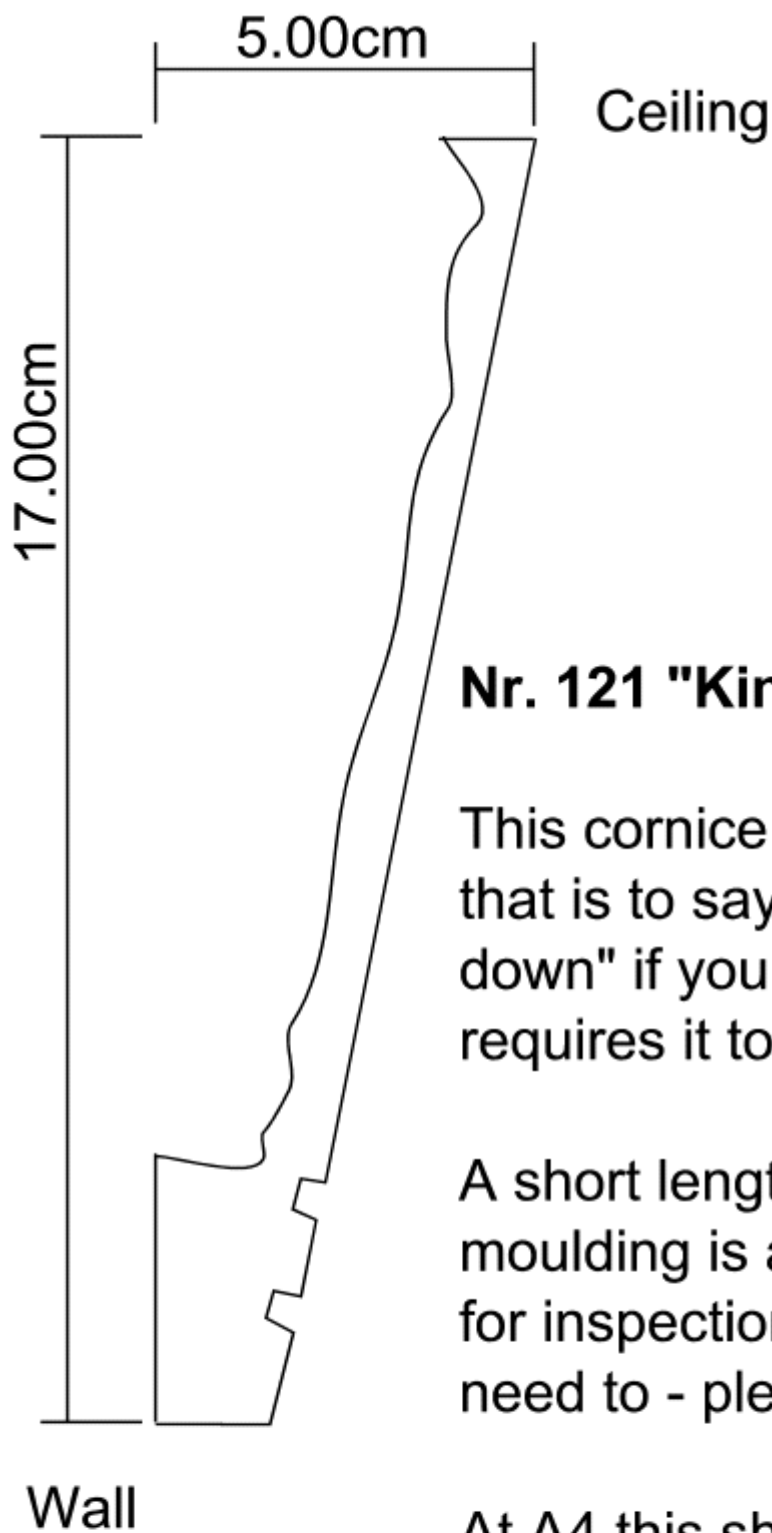

Very modern this one, it has very little projection, at 170mm. it is also quite deep down the wall.

With these proportions this cornice moulding has quite special applications. For instance this was originally designed to avoid air ventilation grilles that were installed / or designed (who knows?) too close to the wall while retaining a cornice moulding to the complete perimeter of the room.

Please refer to the approximate cross sectional sketch on page two before specifying this pattern for you own project.

Projection 50mm. (c.2”)
Depth 170mm. (c.7”)
Length of Cast 3250mm. (10’8”)
Plain Run Section

Nr. 121 "Kings Suite"

This cornice design can be inverted, that is to say it can be fitted "upside down" if you wish - or if your project requires it to.

A short length of this actual cornice moulding is available at our works for inspection should you wish or need to - please ask.

At A4 this should reproduce at full size, but please remember this is only approximate.

Page two of two.
